

GitLab Integration With Jama

The integration of Jama with GitLab ensures completely traceability of all work-items. With this integration, the product management team can easily track commit trends and volume.

Integration overview

In an Application Lifecycle Management (ALM) ecosystem, the choice of systems and the collaboration between the cross-functional teams play a great role. While the choice of systems impacts the productivity of a team, the cross-functional collaboration brings in collective wisdom to take better decisions, faster.

Best-of-breed systems such as GitLab and Jama bring rich functionalities to the ecosystem and make the work of the product and development team easier.

How OpsHub Integration Manager integrates GitLab and Jama

OpsHub Integration Manager integrates all commit related information from GitLab to Jama. It ensures that all data is available to each user, in that user's preferred system, with full context, in real-time. All the details related to a commit can be synced to Jama in various ways, following are a few examples:

- Synchronize every commit as a separate workitem linked to the workitem against which commit happens
- Synchronize commit details as comment to the workitem against which commit happens
- Change workitem field like 'close a workitem' when commit comments contain a pre-defined identifier

How GitLab + Jama integration is beneficial for an enterprise

- Shorten the delivery lifecycle, streamline manual processes and accelerate team velocity
- Track commit volume, track commit trends and edits/changes to commit files in real time
- Enforce authentic commits to make sure each commit is happening against a scheduled and open workitem

Commonly synchronized entities between GitLab and Jama

Benefits of integration for GitLab and Jama users

GitLab users

Jama users

Each commit can be traced back to its respective workitem at any given point in time from GitLab itself	Complete traceability from Jama to source code in GitLab
Enforced checkpoints ensure that no mandatory steps/checks are missed while making a commit – this leads to high success rate for commits	Visibility into the progress of development work, the volume and quality of commits made with full context, in real-time
	Reduced dependency on manual communication to track the completion of a task

Features of Opshub Integration Manager

Bi-directional sync with conflict resolution

Support for the largest number of entities

Database-class reliability and recovery

Support from 50+ systems and growing

History preservation and Process customization

Pre-requisites to run Opshub Integration Manager

Supported Operating Systems

Windows

- Windows Server 2008 R2 and above (64 bit)

Linux

- RHEL 5.2 + (64 bit), RHEL includes Cent OS and Fedora

Database:

- MySQL Server, MS SQL, Oracle, HSQLDB

Supported System Versions

- From 10.7.0 to 13.5.3

- From 8.22 and above
